TSCA RESTRICTED SUBSTANCES DECLARATION

The United States Toxic Substances Control Act (TSCA) is a federal chemicals management regulation. Under TSCA, certain substances and substance families are reportable or restricted from distribution in U.S. commerce. Reporting requirements or restrictions may vary by industry, product type, or substance use, and include substances as identified in Assent's Supplier Portal declarable substance list (DSL) for the TSCA Restrictions Module. This DSL is available for download from the Supplier Portal (for suppliers of Assent clients).

US Digital declares that: *(choose only one of the following two options)*

None of these products contains substances from the TSCA declarable substance list. *(Leave table blank)*

- OR -

The products listed below contain substances from the TSCA declarable substance list, as shown in the following table:

| Product(s) | Substance Name/Group or CAS Number | Concentration (%) | Exemption (if applicable) |
|------------|------------------------------------|-------------------|---------------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

[For the purposes of this declaration, substances restricted only in certain product types or situations need NOT be reported in other product types or situations. For instance, formaldehyde is only restricted in composite wood products; otherwise it does not need to be reported. However, substances restricted without reference to specific product types or use situations must always be reported.]
